SUMMARY

Junior Software Engineer with hands-on experience building production-ready AI systems and SaaS products end to end. Specialized in Generative AI, LLM-powered applications, RAG pipelines, and workflow automation. Strong background in designing scalable backends, modern frontends, and intelligent automation using Python, FastAPI, Flask, Node.js, React, Streamlit, LangChain, vector databases, and n8n. Proven ability to convert unstructured data and manual processes into reliable, scalable AI-driven solutions.

EXPERIENCE

Junior Software Engineer (Python AI & Full Stack) Decotechs

02/2026 – Present

Karachi, Pakistan

- Architected and deployed LLM-based chatbots and RAG pipelines for scalable knowledge retrieval using Python, OpenAI APIs, and Ollama.
- Engineered RESTful APIs with FastAPI, Node.js, and Express; built interactive frontends with React.js and Streamlit.
- Automated complex business workflows using n8n and built an AI-driven job automation system with Python, Playwright, and Streamlit featuring real-time dashboards and notification pipelines.
- Contributed to a MERN-based medical data entry system (MAR module), delivering new features and optimizing performance for healthcare data management.

AI Engineer Intern CoreTech Innovations

08/2025 – 09/2025

Hyderabad, Sindh, Pakistan

- Developed ML models for sentiment analysis and student marks prediction using Python, Scikit-learn, and TensorFlow.
- Built a smart service platform to streamline workflows and boost productivity.
- Handled data preprocessing, feature engineering, model evaluation, and optimization for production-ready solutions.
- Collaborated in Agile teams and communicated insights to drive data-informed business decisions.

EDUCATION

Bachelor of Science in Information Technology

Quaid-e-Awam University of Engineering, Sciences and Technology

CGPA
3.57 / 4.0

12/2021 – 12/2025

Nawabshah, Pakistan

SKILLS

AI / ML	LangChain, RAG, Prompt Engineering, Hugging Face, Transformers, Model Fine-Tuning, Scikit-learn, TensorFlow, Keras, NLTK, OpenCV
LLMs & DBs	OpenAI GPT-4o, Google Gemini, Claude, Ollama, Pinecone, ChromaDB
Backend	Python, FastAPI, Flask, Node.js, Express.js, RESTful API Design
Frontend	React.js, Streamlit, JavaScript, HTML, CSS
Databases	MongoDB, PostgreSQL, MySQL, SQLite
DevOps & Tools	n8n, Docker, AWS, Git, GitHub, Playwright, Jupyter Notebook, Google Colab

PROJECTS

FredCoach – AI Coaching Platform

10/2025 – 11/2025

- Built a subscription-based AI coaching platform using React, Node.js, Express, and MongoDB.
- Implemented a GPT-4o chatbot with RAG, using ChromaDB for semantic document retrieval.
- Integrated Stripe subscriptions with webhook-based access control for tiered feature gating.
- Developed JWT authentication with role-based admin and user access controls.
- Applied backend security practices including rate limiting, CORS, and input validation.

Content Examiner – AI Plagiarism Detection (FYP)

02/2025 – 06/2025

- Built a Flask + React web app for AI-based plagiarism detection using RoBERTa (Transformers) and TF-IDF with cosine similarity.
- Implemented document and text comparison supporting PDF, DOCX, and TXT with JWT-based authentication and secure APIs.
- Generated detailed plagiarism reports with highlighted text, source links, visual charts, and PDF export optimized using NLTK preprocessing.

AI Resume-Based Job Matching Portal

02/2026

- Built a multi-service platform with React, Node.js, Express, MongoDB and a FastAPI AI microservice for resume parsing using Sentence Transformers (all-MiniLM-L6-v2).
- Engineered a weighted match-scoring algorithm combining experience overlap (50%), skill similarity (30%), and Pinecone cosine similarity (20%).
- Configured JWT-based authentication with RBAC for user and admin workflows, including application tracking and lifecycle management.

VoxMind AI – RAG-Based Voice Agent

01/2026

- Built an end-to-end voice & text AI agent using n8n orchestration, Google Gemini (LLM + embeddings), and Pinecone for long-term memory via RAG.
- Automated document ingestion from Google Drive API with chunking and vectorization via LangChain and Gemini embeddings.
- Designed a scalable, modular webhook-based pipeline using n8n, enabling hallucination-resistant responses by injecting Pinecone-retrieved context into Gemini prompts.

CERTIFICATION

Google AI Essentials	Introduction to Generative AI
Full Stack MEAN Developer	Google Prompting Essentials
